HISTORY AND EXAMINATION:

PRESENTING COMPLAINTS:

Multiple episodes of swelling for past 7 months ✓ ★  
Decreased urine output with these episodes

<https://www.childhelpinghand.org/>

HISTORY:

Patient was apparently alright 7 months ago when he developed swelling which started around eyes and gradually progressed to involve the whole body. It was not associated with frothy urine or reddish urine or decreased urine output, not associated with yellowish discoloration of skin, not associated with sweating while feeding  
With these complains patient was shown to local doctor and was given some medications after which there was some improvement but swelling again appeared within seven days and patient was referred to Gorakhpur and then to SGPGI where drugs were changed and urine was told to have protein in it and child was referred to AIIMS. Meanwhile with these medications there was improvement in swelling but it recurred and patient presented to AIIMS OPD where he was started on alternate day Levamisole and steroids were continued. Mother was advised to shift to alternate day steroids when proteinuria becomes trace but she continued giving daily steroids.  
From 19 April patient again had 3+ proteinuria for which full dose steroids were started again but remission has not been achieved till now and patient still has 3+ proteinuria as per diary, besides this patient has again developed swelling starting around eyes and has gradually progressed to involve whole body  
Along with these complains patient has intermittent cough which is not associated with diurnal variation or sputum, he also has one episode of fever
