GENERAL PHYSICAL EXAMINATION : pallor+

Extensive petechiae+
No cyanosis/clubbing

CHEST : B/L clear

CVS : S1/S2-; no murmur

P/A : Soft; Liver 3cm below RCM
Spleen 4 cm below LCM

CNS : No neurologic deficit
no meningeal signs

WARD COURSE:

Child was admitted for clinical TLS as child had raised creatinine record. Child was started on only maintenance fluids and aspirin. However, repeat TLS workup didnot reveal any abnormalities. Child remained afebrile throughout hospital course. However, child had severe thrombocytopenia, attributed to ALL itself, requiring multiple PRP transfusions. Cardiac issues: Child has hypertension and was therefore started on amlodipine. However, child required addition of 2nd antihypertensive carvedilol for BP control. Ped cardio consult was taken. Case discussed with cardiology consultant; plan to do balloon dilation after induction chemotherapy. Plan for chemo: Plan is to start on intermediate risk protocol without anthracyclines. Child received steroids. Vincristine was given and day 8 PS was sent
